Available Blocks & Templates

A library of predefined research blocks and templates that enable researchers to efficiently construct, customize, and scale usability testing studies with a consistent structure and AI-assisted configuration.

1. Block Types

1.1 Welcome Block

The **Welcome Block** is the entry point of a study. It introduces the study to participants, sets expectations, and defines the language used throughout the session.

- **Form Editor:** The Form Editor allows researchers to define the task content and control how AI generates and delivers instructions.

  Structure:
  - **Title (Required):** Should briefly explain what the study is about.
  - **Description (Required):** Supporting text that explains what participants will do and expected from them
  - **Language Selection (Required):** Defines the language used for all participant-facing content in the study.

  User Actions:
  - Enter or edit the Title
  - Enter or edit the Description
  - Select a Language
  - Switch between Form Editor and Preview tabs
  - Close the modal and return to Canvas

  System Behavior:
  - The selected language is applied globally across the study
  - Saves the latest block configuration for:
    - Preview rendering
    - Study execution

- **Preview:** The Preview section allows researchers to quickly validate how an individual block will appear and behave for participants, directly from the Canvas.

  Structure:
  - Title
  - Description
  - **Get Started** button to begin the study
  - Language selector

- Audio Instruction Playback
  - Play/pause control for AI-generated narration
  - Waveform visualization
  - Spoken content is based on:
    - Question
    - Notes (if enabled)

User Actions:
- Play or pause AI narration
- Review transcript text
- Can select the language
- Switch between the Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:
- Uses the latest saved block configuration
- Does not persist any responses
- Does not affect study logic or sequencing
- Reflects changes immediately after:
  - Generate
  - Enhance
  - Manual edits

1.2 Task Block

The **Task Block** represents a single usability task that participants must complete during a study. It supports AI-assisted task generation, voice-guided instructions, and interaction with either a prototype or a live website.

- **Form Editor:** The Form Editor allows researchers to define the task content and control how AI generates and delivers instructions.

  Structure:
  - **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
    - Includes an inline **Generate** button
  - **Task Title (Required:** Short label describing the task
  - **Notes / Description (Optional):** Supporting text that provides additional clarification or context.
  - **Connect Your Product (Required):** Defines the interaction surface used to complete the task and only one option can be active per **Task Block**.
    Options include:
    - Figma Prototype: Requires a valid prototype link
    - Emotions: Requires a valid website URL
  - **Start Screen (Required):** Defines the initial screen where the task begins
    - Editable via screen selector

        - Displays:
            - Screen thumbnail
            - Screen name
- **Success Criteria (Required):** Defines how the system determines task completion.
  Options include:
    - Reach a specific screen: Allows selecting one or more goal screens
    - Follow an exact path: Allows defining a required navigation sequence
- **Conditions (Optional):** Defines conditional logic for navigating between blocks based on task outcomes.

  IF (Condition Trigger) When participant:
    - Didn't succeed
    - Succeed directly
    - Succeed indirectly
    - Took a specific path
    - Misclicked

  OR (Condition Trigger) When participant:
    - Didn't succeed
    - Succeed directly
    - Succeed indirectly
    - Took a specific path
    - Misclicked

  Otherwise option:
    - Continue to the next block
    - Jump to a specific block

- **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity, tone, or structure of the existing block contents.

User Actions:
- Enter or update the Prompt
- Trigger **Generate** or **Enhance**
- Manually edit:
    - Tittle
    - Task Description
- Connect a prototype or website
- Select or update Start Screen
- Define Success Criteria
- Enable or disable Conditions
- Click Enhance at the bottom of the Form Editor
- Switch between Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

    - Uses the Prompt as the primary instruction when AI actions are triggered
    - On **Generate** or **Enhance**:
        - AI updates Task Title and Task Description
        - Changes are applied immediately to the form
    - Updating the Prompt alone does not overwrite existing content
    - Allows manual edits at any time
    - Saves the latest block configuration for:
        - Preview rendering
        - Study execution

- **Preview:** The Preview section allows researchers to quickly validate how an individual block will appear and behave for participants, directly from the Canvas.

  Structure:
    - Task tittle
    - Task Description (if provided)
    - Interaction area for embedded prototype or live website
    - Audio Instruction Playback
        - Play/pause control for AI-generated narration
        - Waveform visualization
        - Spoken content is based on:
            - Question
            - Notes (if enabled)

  User Actions:
    - Play or pause AI narration
    - Review transcript text
    - Interact with the prototype or website
    - Switch between the Form Editor and Preview tabs
    - Close the modal and return to Canvas

  System Behavior:
    - Uses the latest saved block configuration
    - Does not persist any responses
    - Does not affect study logic or sequencing
    - Reflects changes immediately after:
        - Generate
        - Enhance
        - Manual edits

1.3 Open Question Block

The **Open Question Block** is used to collect qualitative, open-ended responses from participants. It allows participants to explain thoughts, perceptions, or reasoning in their own words, and can optionally be paired with a visual reference to provide context.

- **Form Editor:** The Form Editor allows researchers to define the task content and control how AI generates and delivers instructions.

  Structure:
  - **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
    - Includes an inline **Generate** button
  - **Question (Required):** The open-ended question presented to participants
  - **Notes / Description (Optional):** Supporting text that provides additional clarification or context.
  - **Show an Image (Optional):** When enabled, a visual reference is shown alongside the question. Available options:
    - Upload an Image: Allows uploading an image file (e.g. PNG, JPG)
    - Select from Prototype: Allows selecting a screen from an existing Task Block in the same Canvas flow
  - **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity, tone, or structure of the existing block contents.

  User Actions:
  - Enter or update the Prompt
  - Trigger **Generate** or **Enhance**
  - Manually edit:
    - Question
    - Notes / Description
  - Enable or disable the image toggle
  - Upload an image or select a prototype screen
  - Click Enhance at the bottom of the Form Editor
  - Switch between Form Editor and Preview tabs
  - Close the modal and return to Canvas

  System Behavior:
  - Uses the Prompt as the primary instruction when AI actions are triggered
  - On **Generate** or **Enhance**:
    - AI updates Question and Notes/Description.
    - Changes are applied immediately to the form
  - Updating the Prompt alone does not overwrite existing content
  - Allows manual edits at any time
  - Image handling:
    - Uploaded images are block-specific
    - Prototype-based images are synced to the selected screen reference. (If there is a **Task Block** on canvas flows.

- Saves the latest block configuration for:
  - Preview rendering
  - Study execution

- **Preview:** The Preview section allows researchers to quickly validate how an individual block will appear and behave for participants, directly from the Canvas.

  Structure:
  - Question text
  - Notes / Description (if provided)
  - Image (if enabled)
  - Answer box
  - Audio Instruction Playback
    - Play/pause control for AI-generated narration
    - Waveform visualization
    - Spoken content is based on:
      - Question
      - Notes (if enabled)

  User Actions:
  - Play or pause AI narration
  - Review transcript text
  - Enter a free-text response
  - Switch between the Form Editor and Preview tabs
  - Close the modal and return to Canvas

  System Behavior:
  - Uses the latest saved block configuration
  - Does not persist any responses
  - Does not affect study logic or sequencing
  - Reflects changes immediately after:
    - Generate
    - Enhance
    - Manual edits

1.4 Simple Input Block

The **Simple Input Block** is used to collect short, structured responses from participants, such as text, numbers, email addresses, or dates. It is suitable for capturing factual inputs or specific data points within a study flow and can optionally include a visual reference for context.

- **Form Editor:** The Form Editor allows researchers to define the task content and control how AI generates and delivers instructions.

Structure:

- **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
  - Includes an inline **Generate** button
- **Question (Required):** The open-ended question presented to participants
- **Notes / Description (Optional):** Supporting text that provides additional clarification or context.
- **Show an Image (Optional):** When enabled, a visual reference is shown alongside the question. Available options:
  - Upload an Image: Allows uploading an image file (e.g. PNG, JPG)
  - Select from Prototype: Allows selecting a screen from an existing Task Block in the same Canvas flow
- **Type (Required):** Defines the expected input format.
  Available options:
  - Text: Free-text input
  - Numerical: Accepts numeric values only
  - Email: Accepts valid email format
  - Date:Date picker input
- **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity, tone, or structure of the existing block contents.

User Actions:

- Enter or update the Prompt
- Trigger **Generate** or **Enhance**
- Manually edit:
  - Question
  - Notes / Description
- Select an input Type
- Enable or disable the image toggle
- Upload an image or select a prototype screen
- Click Enhance at the bottom of the Form Editor
- Switch between Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

- Uses the Prompt as the primary instruction when AI actions are triggered
- On **Generate** or **Enhance**:
  - AI updates Question and Notes/Description.
  - Changes are applied immediately to the form
- Updating the Prompt alone does not overwrite existing content
- Allows manual edits at any time
- Input validation behavior:
  - Text: accepts all characters
  - Numerical: restricts non-numeric characters

        - Email: validates email format before submission
        - Date: enforces date picker input
    - Image handling:
        - Uploaded images are block-specific
        - Prototype-based images are synced to the selected screen reference. (If there is a **Task Block** on canvas flows.
    - Saves the latest block configuration for:
        - Preview rendering
        - Study execution

- **Preview:** The Preview section allows researchers to quickly validate how an individual block will appear and behave for participants, directly from the Canvas.

  Structure:
    - Question text
    - Notes / Description (if provided)
    - Image (if enabled)
    - Input field based on selected type:
        - Text field
        - Numeric field
        - Email field
        - Date picker
    - Audio Instruction Playback
        - Play/pause control for AI-generated narration
        - Waveform visualization
        - Spoken content is based on:
            - Question
            - Notes (if enabled)

  User Actions:
    - Play or pause AI narration
    - Review transcript text
    - Enter a sample response
    - Switch between the Form Editor and Preview tabs
    - Close the modal and return to Canvas

  System Behavior:
    - Uses the latest saved block configuration
    - Does not persist any responses
    - Does not affect study logic or sequencing
    - Reflects changes immediately after:
        - Generate
        - Enhance
        - Manual edits

1.5 Opinion Scale Block

The **Opinion Scale Block** is used to capture participants' subjective opinions, attitudes, or perceptions using a defined rating scale. It supports multiple scale styles and customizable ranges to fit different research needs.

- **Form Editor:** The Form Editor allows researchers to define the task content and control how AI generates and delivers instructions.

  Structure:
  - **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
    - Includes an inline **Generate** button
  - **Question (Required):** The open-ended question presented to participants
  - **Notes / Description (Optional):** Supporting text that provides additional clarification or context.
  - **Scale Type (Required):** Defines the visual style of the opinion scale. Available options
    - **Numerical:** Displays numbers in sequence
      - Scale range setting (1-10 or 1-5)
      - Lowest value label (optional)
      - Highest value label (optional)
    - **Stars:** Displays star icons representing the scale
      - Scale range setting (1-5)
      - Lowest value label (optional)
      - Highest value label (optional)
    - **Emotion:** Displays emotion icons from negative to positive sentiment
      - Scale range setting (1-5)
      - Lowest value label (optional)
      - Highest value label (optional)
  - **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity, tone, or structure of the existing block contents.

  User Actions:
  - Enter or update the Prompt
  - Trigger **Generate** or **Enhance**
  - Manually edit:
    - Question
    - Notes / Description
  - Select a Scale Type
  - Manually edit:
    - Scale range
    - Lowest and highest labels within the selected scale type
  - Click Enhance at the bottom of the Form Editor

    - Switch between Form Editor and Preview tabs
    - Close the modal and return to Canvas

    System Behavior:
    - Uses the Prompt as the primary instruction when AI actions are triggered
    - On **Generate** or **Enhance**:
        - AI updates Question and Notes/Description.
        - Changes are applied immediately to the form
    - Updating the Prompt alone does not overwrite existing content
    - Allows manual edits at any time
    - Scale behavior:
        - Selecting a scale type
        - Changing the Scale Range
        - Labels:
            - Apply only to the lowest and highest scale values
            - Are displayed near the corresponding scale endpoints
    - Saves the latest block configuration for:
        - Preview rendering
        - Study execution

- **Preview:** The Preview section allows researchers to quickly validate how an individual block will appear and behave for participants, directly from the Canvas.

    Structure:
    - Question text
    - Notes / Description (if provided)
    - Opinion scale: Numerical values, stars, or emotion icons
    - Scale labels (if provided)
    - Audio Instruction Playback
        - Play/pause control for AI-generated narration
        - Waveform visualization
        - Spoken content is based on:
            - Question
            - Notes (if enabled)

    User Actions:
    - Play or pause AI narration
    - Review transcript text
    - Select a scale value
    - Switch between the Form Editor and Preview tabs
    - Close the modal and return to Canvas

    System Behavior:
    - Uses the latest saved block configuration

- Allows selecting a scale value for validation
- Does not persist any responses
- Does not affect study logic or sequencing
- Reflects changes immediately after:
  - Generate
  - Enhance
  - Manual edits

1.6 Multiple Choice Block

The **Multiple Choice Block** is used to collect structured responses by allowing participants to select one or more options from a predefined list. It supports single or multiple selection, optional visual context, and flexible choice configuration.

- **Form Editor:** The Form Editor allows researchers to define the task content and control how AI generates and delivers instructions.

  Structure:
  - **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
    - Includes an inline **Generate** button
  - **Question (Required):** The open-ended question presented to participants
  - **Notes / Description (Optional):** Supporting text that provides additional clarification or context.
  - **Show an Image (Optional):** When enabled, a visual reference is shown alongside the question. Available options:
    - Upload an Image: Allows uploading an image file (e.g. PNG, JPG)
    - Select from Prototype: Allows selecting a screen from an existing Task Block in the same Canvas flow
  - **Selection Type (Required):** Defines how participants can select answers. Available options
    - **Single select:** Participants can select only one option
    - **Multi select:** Participants can select multiple options
  - **Choices (Required):** Defines the list of answer options shown to participants. Choice list behavior:
    - Each choice includes text input field
    - User can:
      - Add a new choice
      - Edit choice text
      - Remove a choice
      - Reorder choices via drag-and-drop
    - Shuffle Choices Toggle: When enabled, choices are displayed in a random order for each participant
  - **"Other" Option Toggle:** Allow participants to enter a custom answer
  - **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity,

tone, or structure of the existing block contents.

User Actions:

- Enter or update the Prompt
- Trigger **Generate** or **Enhance**
- Manually edit:
  - Question
  - Notes / Description
- Enable or disable the image toggle
- Upload an image or select a prototype screen
- Select a Selection Type
- Add, edit, reorder, or remove choices
- Enable or disable Shuffle choices
- Click Enhance at the bottom of the Form Editor
- Enable or disable the "Other" option
- Switch between Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

- Uses the Prompt as the primary instruction when AI actions are triggered
- On **Generate** or **Enhance**:
  - AI updates Question and Notes/Description.
  - Changes are applied immediately to the form
- Updating the Prompt alone does not overwrite existing content
- Allows manual edits at any time
- Image handling:
  - Uploaded images are block-specific
  - Prototype-based images are synced to the selected screen reference. (If there is a **Task Block** on canvas flows.
- Choice behavior:
  - At least two choices is required
  - Empty choice inputs are not allowed on save
  - Reordering choices updates their display order immediately
- Shuffle behavior when enabled:
  - Choices are randomized per participant
  - Order remains consistent for a single participant session
- "Other" option behavior when enabled:
  - The text input is shown inline with the option
  - Participants must enter text before proceeding
- Saves the latest block configuration for:
  - Preview rendering
  - Study execution

- **Preview:** The Preview section allows researchers to quickly validate how an individual

block will appear and behave for participants, directly from the Canvas.

Structure:

- Question text
- Notes / Description (if provided)
- Image (if enabled)
- Choice list: Radio buttons (single select) **or** Checkboxes (multi select)
- "Other" input field (if enabled)
- Audio Instruction Playback
  - Play/pause control for AI-generated narration
  - Waveform visualization
  - Spoken content is based on:
    - Question
    - Notes (if enabled)

User Actions:

- Play or pause AI narration
- Review transcript text
- Select a scale value
- Switch between the Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

- Uses the latest saved block configuration
- Select one or more choices
- Enter a custom answer for "Other" (if enabled)
- Does not persist any responses
- Does not affect study logic or sequencing
- Reflects changes immediately after:
  - Generate
  - Enhance
  - Manual edits

1.7 Yes/No

The **Yes / No Block** represents a binary decision task where participants respond to a clear, closed-ended question. It is used to quickly validate comprehension, perception, or agreement with a specific concept, screen, or message.

- **Form Editor:** The Form Editor allows researchers to define the task content and control how AI generates and delivers instructions.

  Structure:

  - **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
    - Includes an inline **Generate** button

- **Question (required):** Defines the Yes / No question presented to participants.
- **Notes / Description (Optional):** Supporting text that provides additional clarification or context.
- **Visual Type:** Controls how Yes / No options are visually represented
  Options include:
  - Icons:
    - ✅Yes
    - ❌No
  - Emotions
    - 🙂Yes
    - ☹️No
- **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity, tone, or structure of the existing block contents.

User Actions:

- Enter or update the Prompt
- Click **Generate** inside the Prompt input
- Manually edit:
  - Question
  - Notes / Description
- Select a Visual Type
- Click **Enhance** at the bottom of the Form Editor
- Switch between Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

- **Generate** (from Prompt):
  - Uses the Prompt as the primary instruction for AI
  - AI generates or replaces:
    - Question
    - Notes (if applicable)
  - Changes are applied immediately to the form
- **Enhance** (bottom action):
  - Uses existing Question and Notes as input
  - Refines wording, clarity, and structure
- Updating the Prompt alone does not overwrite content until **Generate** is triggered
- Manual edits are always allowed
- Saves the latest block configuration for:
  - Preview rendering
  - Study execution

- **Preview:** The Preview section allows researchers to quickly validate how an individual block will appear and behave for participants, directly from the Canvas.

Structure:

- Question
- Notes / Description (if provided)
- Selected Visual Type (e.g., Icons or Emotions)
- Audio Instruction Playback
  - Play/pause control for AI-generated narration
  - Waveform visualization
  - Spoken content is based on:
    - Question
    - Notes (if enabled)

User Actions:

- Play or pause AI narration
- Review transcript text
- Click Yes / No to test interaction affordance
- Switch between the Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

- Uses the latest saved block configuration
- Does not persist any responses
- Does not affect study logic or sequencing
- Reflects changes immediately after:
  - Generate
  - Enhance
  - Manual edits

1.8 Context Screen

The **Context Screen Block** represents a non-interactive informational screen used to provide participants with guidance, background context, or instructions before they proceed to a task.

- **Form Editor:** The Form Editor allows researchers to define the informational content of the Context Screen and control how AI delivers the message to participants.

  Structure:

  - **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
    - Includes an inline **Generate** button
  - **Message (required):** The primary informational message shown to participants.
  - **Notes / Description (Optional):** Supporting text that provides additional clarification.
  - **Image (Optional):** Allows an image to be displayed within the block.
  - **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity,

tone, or structure of the existing block contents.

User Actions:

- Enter or update the Prompt
- Click **Generate** inside the Prompt input
- Manually edit:
  - Message
  - Notes/Description
- Upload or remove an image
- Toggle image visibility
- Click **Enhance** at the bottom of the Form Editor
- Switch between Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

- **Generate** (from Prompt):
  - Uses the Prompt as the primary instruction for AI
  - AI generates or replaces:
    - Question
    - Notes (if applicable)
  - Changes are applied immediately to the form
- **Enhance** (bottom action):
  - Uses existing Question and Notes as input
  - Refines wording, clarity, and structure
- Updating the Prompt alone does not overwrite content until **Generate** is triggered
- Manual edits are always allowed
- Saves the latest block configuration for:
  - Preview rendering
  - Study execution

- **Preview:** The Preview section allows researchers to quickly validate how an individual block will appear and behave for participants, directly from the Canvas.

  Structure:

  - Message
  - Notes / Description (if provided)
  - Image (if provided)
  - Audio Instruction Playback
    - Play/pause control for AI-generated narration
    - Waveform visualization
    - Spoken content is based on:
      - Message
      - Notes (if enabled)

User Actions:

- Play or pause AI narration
- Review transcript text
- See image (if provided)
- Switch between the Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

- Uses the latest saved block configuration
- Does not persist any responses
- Does not affect study logic or sequencing
- Reflects changes immediately after:
  - Generate
  - Enhance
  - Manual edits

1.9 5 Second Test

The **5-Second Test Block** is used to briefly expose participants to a visual stimulus and capture their **first impression or immediate understanding**. The image is shown for a limited time, then hidden, encouraging instinctive responses rather than reflective ones.

- **Form Editor:** The Form Editor allows researchers to define the content of the **5-Second** exposure and control how the stimulus is presented.

  Structure:

  - **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
    - Includes an inline **Generate** button
  - **Image (required):** The visual stimulus shown to participants for a limited time.
    - Accepted formats: PNG, JPG, GIF
  - **Title (required):** A short, descriptive title explaining what the participant is viewing.
  - **Message / Body (optional):** Supporting text that provides additional clarification.
  - **Number of seconds to show image (required):** Controls how long the image is visible to participants.
    - Minimum value: 5 seconds
    - Default value: 5 seconds
    - Adjustable using increment/decrement controls
    - Automatically move to the next block when the timer ends
  - **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity, tone, or structure of the existing block contents.

  User Actions:

  - Enter or update the Prompt

- Click **Generate** inside the Prompt input
- Manually edit:
  - Title
  - Message
- Upload or change an image
- Click **Enhance** at the bottom of the Form Editor
- Switch between the Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

- **Generate** (from Prompt):
  - Uses the Prompt as the primary instruction for AI
  - AI generates or replaces:
    - Title
    - Message (if applicable)
  - **Image and duration** are **not auto-generated**
  - Changes are applied immediately to the form
- **Enhance** (bottom action):
  - Uses existing Title and Message as input
  - Refines wording, clarity, and structure
  - Do not change:
    - Uploaded image
    - Image duration
- Updating the Prompt alone does not overwrite content until **Generate** is triggered
- **An image is required** before the block can be saved
- Duration **cannot be set below 5 seconds**
- Manual edits are always allowed
- Saves the latest block configuration for:
  - Preview rendering
  - Study execution

- **Preview:** The Preview section allows researchers to validate how the 5-Second Test will appear to participants.

  Structure:

  - Title
  - Message (if provided)
  - Image with countdown timer (minimum 5 seconds)
  - Audio Instruction Playback
    - Play/pause control for AI-generated narration
    - Waveform visualization
    - Spoken content is based on:
      - Title
      - Message (if enabled)

User Actions:

- Observe the image countdown behavior
- Validate timing and layout
- Play or pause AI narration
- Review transcript text
- Switch between the Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

- Uses the latest saved block configuration
- Does not persist any responses
- Does not affect study logic or sequencing
- Reflects changes immediately after:
  - Generate
  - Enhance
  - Manual edits

1.10 Tree Test

The **Tree Test Block** is used to evaluate how well participants can understand and navigate an information hierarchy. Participants are asked to complete a task by navigating through a tree structure and selecting the page they believe is the correct answer.

- **Form Editor:** The Form Editor allows researchers to define the task scenario, configure the tree structure, and control how participants interact with the hierarchy.

  Structure:

  - **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
    - Includes an inline **Generate** button
  - **Task (required):** Defines the scenario or goal the participant should imagine while navigating the tree.
  - **Description (optional):** Supporting text that provides additional clarification.
  - **Tree Structure (required):** Represents the hierarchical navigation structure participants will explore.

    Actions:
    - Add a page
    - Add subpages
    - Edit page or subpage labels
    - Delete pages or subpages
    - Reorder pages or subpages
    - Expand or collapse tree levels
    - Select **one page** as the participant's final answer
  - **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity, tone, or structure of the existing block contents.

User Actions:

- Enter or update the Prompt
- Click **Generate** inside the Prompt input
- Manually edit:
  - Task
  - Description
  - Tree pages and subpages (add, edit, delete, reorder, select page answer)
- Click **Enhance** at the bottom of the Form Editor
- Switch between the Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:

- **Generate** (from Prompt):
  - Uses the Prompt as the primary instruction for AI
  - AI generates or replaces:
    - Task
    - Description (if applicable)
  - **Tree structure is not auto-generated**
  - Changes are applied immediately to the form
- **Enhance** (bottom action):
  - Uses existing Task and Description as input
  - Refines wording, clarity, and structure
  - Do not change:
    - Tree structure
    - Page hierarchy
- Updating the Prompt alone does not overwrite content until **Generate** is triggered
- **The tree structure** must contain at least **one selectable page**
- **Participants** can **select** only one page as the answer
- Manual edits are always allowed
- Saves the latest block configuration for:
  - Preview rendering
  - Study execution

- **Preview:** The Preview section allows researchers to validate how the Tree Test will appear and behave for participants.

  Structure:

  - Task
  - Description (if provided)
  - Interactive tree structure
  - Audio Instruction Playback
    - Play/pause control for AI-generated narration
    - Waveform visualization
    - Spoken content is based on:

        - Task
        - Description (if enabled)

User Actions:
- Navigate through pages and subpages
- Select a page to test the answer interaction
- Validate hierarchy clarity and labeling
- Play or pause AI narration
- Review transcript text
- Switch between the Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:
- Uses the latest saved block configuration
- Does not persist any responses
- Does not affect study logic or sequencing
- Reflects changes immediately after:
    - Generate
    - Enhance
    - Manual edits

1.11 Card Sorting

The **Card Sorting Block** is used to understand how participants group, categorize, and prioritize information. Participants are asked to sort cards into categories, either predefined or self-created, revealing their mental models and expectations.

- **Form Editor:** The Form Editor allows researchers to define instructions, configure cards and categories, and control how participants perform the sorting task.

  Structure:
  - **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
    - Includes an inline **Generate** button
  - **Task (required):** Defines the main instruction or goal of the card sorting task.
  - **Description (optional):** Supporting text that provides additional clarification.
  - **Cards (required):** Represent the set of items participants will sort.

    Capabilities:
    - Add cards
    - Edit card labels
    - Delete cards
    - View total card count

    Options:

    - **Shuffle cards** (toggle): When enabled, cards are shown in a random order for each participant

        - **Allow participants to continue without completing** (toggle): When enabled, participants can skip the task and continue to the next block
        - **Require participants to rank cards** (toggle): When enabled, participants must drag and drop cards to rank them within a category.
    - **Card Sorting Type (required):**
        - **Closed**: Participants sort cards into categories predefined by the researcher.
        - **Open**: Participants create their own categories as they sort cards.
    - **Categories (required for Closed Card Sorting):** Defines the predefined groups used in a Closed Card Sorting task.

      Capabilities:

        - Add categories
        - Edit category names
        - Delete categories
        - View total category count

      Options:

        - **Shuffle categories** (toggle): When enabled, cards are shown in a random order for each participant
    - **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity, tone, or structure of the existing block contents.

User Actions:
- Enter or update the Prompt
- Click **Generate** inside the Prompt input
- Manually edit:
    - Title
    - Description
    - Cards (add, edit, delete)
    - Categories (add, edit, delete — Closed type only)
    - Card sorting options (shuffle, ranking, completion rules)
    - Card sorting type (Open or Closed)
- Click **Enhance** at the bottom of the Form Editor
- Switch between the Form Editor and Preview tabs
- Close the modal and return to Canvas

System Behavior:
- **Generate** (from Prompt):
    - Uses the Prompt as the primary instruction for AI
    - AI generates or replaces:
        - Task
        - Description (if applicable)
    - **Cards and categories are not auto-generated**
    - Changes are applied immediately to the form

- **Enhance** (bottom action):
  - Uses existing Task and Description as input
  - Refines wording, clarity, and structure
  - Do not change:
    - Cards
    - Categories
    - Sorting type or toggles
- Updating the Prompt alone does not overwrite content until **Generate** is triggered
- At least **one card is required**
- **Closed Card Sorting** requires at least **one category**
- Manual edits are always allowed
- Saves the latest block configuration for:
  - Preview rendering
  - Study execution

- **Preview:** The Preview section allows researchers to validate how the Card Sorting task will appear and behave for participants.

  Structure:
  - Task
  - Description (if provided)
  - Cards
  - Categories (for Closed type)
  - Audio Instruction Playback
    - Play/pause control for AI-generated narration
    - Waveform visualization
    - Spoken content is based on:
      - Task
      - Description (if enabled)

  User Actions:
  - Drag and drop cards into categories
  - Rank cards (if enabled)
  - Create categories (Open type only)
  - Validate task clarity and interaction behavior
  - Play or pause AI narration
  - Review transcript text
  - Switch between the Form Editor and Preview tabs
  - Close the modal and return to Canvas

  System Behavior:
  - Uses the latest saved block configuration
  - Does not persist any responses
  - Does not affect study logic or sequencing

- Reflects changes immediately after:
  - Generate
  - Enhance
  - Manual edits

1.12 Legal Screen

The **Legal Screen Block** is used to present mandatory legal information, such as an NDA, consent form, or privacy policy, to participants before they proceed with the study. Participants must review the document and explicitly agree to the terms in order to continue.

- **Form Editor:** The Form Editor allows researchers to define the legal content, upload required documents, and control participant consent behavior.

  Structure:
  - **Prompt AI Input:** A free-text input used to guide AI generation and enhancement of the task.
    - Includes an inline **Generate** button
  - **Title (required):** Defines the headline shown to participants explaining the purpose of the legal screen.
  - **Description (optional):** Supporting text that explains what the participant needs to review or agree to.
  - **Document (required):** The legal document presented to participants.
    - Accepted formats: PDF
    - Examples: NDA, consent form, privacy policy
    - Must be uploaded before the block can be saved
  - **Consent Checkbox (required):** Participants must confirm agreement before continuing.
    - Checkbox label is fixed (e.g., *"I agree with the terms"*)
    - Continue action is disabled until the checkbox is selected
  - **Enhance (AI Action):** Located at the bottom of the Form Editor to improve clarity, tone, or structure of the existing block contents.

  User Actions:
  - Enter or update the Prompt
  - Click **Generate** inside the Prompt input
  - Manually edit:
    - Title
    - Description
    - Upload or replace the document
  - Click **Enhance** at the bottom of the Form Editor
  - Switch between the Form Editor and Preview tabs
  - Close the modal and return to Canvas

  System Behavior:

- **Generate** (from Prompt):
  - Uses the Prompt as the primary instruction for AI
  - AI generates or replaces:
    - Title
    - Description (if applicable)
  - **Legal document is not auto-generated**
  - **Consent checkbox behavior is not modified**
  - Changes are applied immediately to the form
- **Enhance** (bottom action):
  - Uses existing Title and Description as input
  - Refines wording, clarity, and structure
  - Do not change:
    - Uploaded document
    - Consent requirement
- Updating the Prompt alone does not overwrite content until **Generate** is triggered
- Manual edits are always allowed
- Saves the latest block configuration for:
  - Preview rendering
  - Study execution

- **Preview:** The Preview section allows researchers to validate how the 5-Second Test will appear to participants.

  Structure:
  - Title
  - Description (if provided)
  - Document preview (file name + type)
  - Consent checkbox
  - Audio Instruction Playback
    - Play/pause control for AI-generated narration
    - Waveform visualization
    - Spoken content is based on:
      - Title
      - Description (if enabled)

  User Actions:
  - Review the document
  - Select or deselect the consent checkbox
  - Test the continue button enable/disable behavior
  - Play or pause AI narration
  - Review transcript text
  - Switch between the Form Editor and Preview tabs
  - Close the modal and return to Canvas

System Behavior:

- Uses the latest saved block configuration
- Does not persist any responses
- Does not affect study logic or sequencing
- Reflects changes immediately after:
  - Generate
  - Enhance
  - Manual edits

1.13 Thank You

The **Thank You Block** is used to close a study by acknowledging participants' time and contribution. It provides a clear end state and leaves participants with a positive final impression.

- **Form Editor:** The Form Editor allows researchers to define the closing message shown to participants at the end of the study.

  Structure:

  - **Title (required):** The main heading displayed to participants.

    Default: *"Thank You"*

  - **Description (optional):** Supporting text shown below the title.

    Default: *"We appreciate the time and effort you put into sharing your perspective. Your input helps shape better experiences for everyone."*

  - **Image (optional):** An optional visual shown alongside the title and message.
    - Accepted formats: PNG, JPG, GIF
    - Decorative only
    - Does not affect study logic or completion

  User Actions:

  - Manually edit:
    - Title
    - Message
    - Upload, change, or remove an image
  - Switch between the Form Editor and Preview tabs
  - Close the modal and return to Canvas

  System Behavior:

  - The title is required before the block can be saved
  - Message and image are optional
  - **Default content is applied when the block is first created**
  - Manual edits are always allowed
  - Saves the latest block configuration for:
    - Preview rendering

        - Study execution

- **Preview:** The Preview section allows researchers to validate how the Thank You screen will appear to participants.

  Structure:
  - Title
  - Description (if provided)
  - Image (if provided)
  - Audio Instruction Playback
    - Play/pause control for AI-generated narration
    - Waveform visualization
    - Spoken content is based on:
      - Title
      - Description (if enabled)

  User Actions:
  - Play or pause AI narration
  - Review transcript text
  - See image (if provided)
  - Switch between the Form Editor and Preview tabs
  - Close the modal and return to Canvas

  System Behavior:
  - Uses the latest saved block configuration
  - Does not persist any responses
  - Does not affect study logic or sequencing
  - Reflects changes immediately after:
    - Generate
    - Enhance
    - Manual edits

2. Available Templates

2.1 Usability testing a new product

Description:

Test how real users interact with your early designs from wireframes to clickable prototypes. This ready-to-use template helps you uncover usability issues, accessibility gaps, and overall experience insights before launch, so you can confidently refine what matters most.

What you'll gain from this test:

✅ **Understand navigation clarity**
See whether users can move through your prototype smoothly, complete tasks successfully, and find what they need without confusion, supported by clear usability indicators and task outcomes.

✅ **Reveal friction and opportunities**
Spot usability pain points, confirm which design choices work well, and identify areas that need improvement based on real user behavior.

✅ **Collect meaningful user feedback**
Provide users with space to freely share thoughts, expectations, and suggestions through open-ended, unmoderated responses.

✅ **Build a scalable testing habit**
Establish a repeatable approach to usability and interface testing that fits seamlessly into your ongoing product design process.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Yes/No**
   - Question (required): *"Have you used [Product] before?"*
   - Notes / Description (optional): -
   - Visual Type
     - Icons:
       - ✅Yes
       - ❌No
3. **Multiple Choice**
   - Question (Required): *"If yes, how often do you use [Product] per week?"*
   - Notes / Description (Optional): *"If no, skip to the next question."*
   - Show an Image (Optional): -
   - Selection Type (Required): Single select (Radio button)
   - Choices (Required): Each choice includes a text input field
     Options:
     - Once a week
     - Twice a week
     - Three times a week
     - Five times a week
     - More than five times a week
4. **Task**
   - Task Title (Required): *"Imagine you were trying to accomplish [sending money] from your account"*
   - Notes / Description (Optional): *"Please could you show what you would do to get there?"*
   - Connect Your Product (Required): Linked manually
   - Start Screen (Required): Edit manually
   - Success Criteria (Required): Edit manually

5. **Open Question**
   - Question (Required): *"What would you expect to happen once you've sent money to someone?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
6. **Open Question**
   - Question (Required): *"Do you have any final thoughts on what you saw today?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
7. **Thank You (as default)**

2.2 Run an early prototype test

Description:

Validate your early-stage designs by testing them with real users. This template helps you uncover user expectations, confusion points, and usability gaps early—so you can refine ideas faster, reduce risks, and move forward with clarity and confidence.

What you'll gain from this test:

✅ **Build with confidence from the start**
Validate your ideas early in the design process to ensure you're solving the right problems and heading in a direction that truly meets user needs.

✅ **Spot navigation and usability issues**
Learn whether users can move through your product smoothly and discover if key features are easy to find and understand.

✅ **Reduce costly changes after launch**
Identify friction points and improvement opportunities early, using direct feedback from real users—not assumptions.

✅ **Create a culture of continuous learning**
Share insights across teams to align decisions, encourage collaboration, and work toward a shared product vision.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Context Screen**
   - Question (required): *"We're working on a [sports streaming service]?"*
   - Notes / Description (optional): You'll see an example of our new website and be asked some quick questions in response to it.
3. **Open Question**
   - Question (Required): *"What would you expect to see from our website?"*
   - Notes / Description (Optional): -

- Show an Image (Optional): -

4. **Task**
   - Task Title (Required): *"Sign up to [Product]"*
   - Notes / Description (Optional): -
   - Connect Your Product (Required): Linked manually
   - Start Screen (Required): Edit manually
   - Success Criteria (Required): Edit manually
5. **Opinion Scale**
   - Question (Required): *"Did the experience meet your expectations?"*
   - Notes / Description (Optional): -
   - Scale Type: Emotion (1-10)
   - Label (Optional): -
6. **Open Question**
   - Question (Required): *"What could be improved?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
7. **Opinion Scale**
   - Question (Required): "How did you find the ease of use?"
   - Notes / Description (Optional): -
   - Scale Type: Numerical (1-10)
   - Label (Optional): Difficult to use, Neutral, Easy to use
8. **Open Question**
   - Question (Required): *"Any other feedback you'd like to add?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
9. **Thank You (as default)**

2.3 Feature discoverability template

Description:

Want to make key features easier to find? This template helps you assess how discoverable your features are, uncover where users get stuck, and surface usability issues that impact feature adoption.

What you'll gain from this test:

✅ **How discoverable your features really are**
Test whether users can locate key features naturally and gather actionable insights from early prototype testing.

✅ **The story behind underperforming features**
Uncover the reasons why certain features aren't being used as expected by exploring user behavior and feedback.

✅ **Where users struggle—and why**

Identify usability challenges users face during tasks, then dig deeper with contextual follow-up questions.

✅ **Scale discovery-focused testing**
Apply prototype testing across your design process and support a culture of continuous product learning.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Open Question**
   - Question (Required): *"Before we start, could you please tell us briefly about what you do professionally?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
3. **Yes/No**
   - Question (required): *"Have you ever [delivered a package] on [Product]?"*
   - Notes / Description (optional): -
   - Visual Type
     - Icons:
       - ✅Yes
       - ❌No
4. **Yes/No**
   - Question (required): *"Did you know [Product] [delivered parcels]?"*
   - Notes / Description (optional): -
   - Visual Type
     - Icons:
       - ✅Yes
       - ❌No
5. **Open Question**
   - Question (Required): *"Could you tell us more about why you haven't used this feature yet?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
6. **Open Question**
   - Question (Required): *"Could you explain what you consider when using [Product] to [deliver a package]?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -

7. **Task**
   - Task Title (Required): *"Book a 10kg parcel for December 14th"*
   - Notes / Description (Optional): -
   - Connect Your Product (Required): Linked manually
   - Start Screen (Required): Edit manually

- Success Criteria (Required): Edit manually

8. **Opinion Scale**
   - Question (Required): *"How was your overall experience?"*
   - Notes / Description (Optional): -
   - Scale Type: Numerical (1-10)
   - Label: Very unintuitive, Very intuitive
9. **Open Question**
   - Question (Required): *"Was there anything missing from your experience?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
10. **Yes/No**
    - Question (required): *"Would you use this [Feature] in future?"*
    - Notes / Description (optional): -
    - Visual Type
      - Icons:
        - ✅Yes
        - ❌No
11. **Context Screen**
    - Question (required): *"We're working on a [sports streaming service]?"*
    - Notes / Description (optional): You'll see an example of our new website and be asked some quick questions in response to it.
12. **Open Question**
    - Question (Required): *"Please could you explain your answer?"*
    - Notes / Description (Optional): -
    - Show an Image (Optional): -
13. **Thank You (as default)**

2.4 Collect insights on features

Description:

Evaluate how well your features work for real users. This test helps you gather usability insights quickly—so you can identify gaps, validate assumptions, and improve features with confidence.

What you'll gain from this test:

✅ **Are your features truly useful?**
Learn whether users find your product easy to use and if your features genuinely help them solve real problems.

✅ **Turn feedback into roadmap decisions**
Collect actionable insights that help prioritize improvements and guide your product roadmap.

✅ **Measure user satisfaction**

Understand how users feel about your existing features by analyzing sentiment and overall satisfaction.

✅ **Strengthen what already works**
Refine and optimize current features so users can work more effectively and with less friction.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Opinion Scale**
   - Question (Required): *"How easy to use is [Feature]?"*
   - Notes / Description (Optional): -
   - Scale Type (Required): Emotion (1-9)
   - Label: -
3. **Multiple Choice**
   - Question (Required): *"How reliable is the performance of [Feature]?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
   - Selection Type (Required): Single select (Radio button)
   - Choices (Required): Each choice includes a text input field
     Options:
     - Extremely reliable
     - Reliable
     - Neutral
     - Unreliable
     - Extremely unreliable
4. **Yes/No**
   - Question (required): *"Were you able to accomplish what you used [Feature] for?"*
   - Notes / Description (optional): -
   - Visual Type
     - Icons:
       - ✅Yes
       - ❌No
5. **Opinion Scale**
   - Question (Required): *"How satisfied are you with [Feature]?"*
   - Notes / Description (Optional): -
   - Scale Type (Required): Emotion (1-9)
   - Label (Optional): Not at all satisfied, Very satisfied
6. **Thank You (as default)**

2.5 Test feature usability

Description:

Whether you're launching a new feature or reviewing an existing one, this template helps you understand how users interact with it. Test task completion, identify usability issues early, and resolve problem areas before launch—saving time and development effort.

What you'll gain from this test:

- ✅ **Can users complete key tasks?**
  Assess whether users can successfully finish assigned tasks and capture an overall usability score for your feature.
- ✅ **Where usability breaks down**
  Identify pain points and areas of confusion so you can make targeted improvements before release.
- ✅ **What users feel is missing**
  Collect qualitative feedback to understand gaps, unmet expectations, and opportunities to create a more user-centered experience.
- ✅ **A scalable approach to feature testing**
  Learn a repeatable framework for gathering and sharing user insights across product and design teams.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Open Question**
   - Question (Required): *"Before we start, could you please tell us briefly about what you do professionally?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
3. **Context Screen**
   - Question (required): *"In the next step you'll see a prototype of a bank app."*
   - Notes / Description (optional): "*Don't worry if something does not work, this is just a prototype so some functionality will be missing."*
4. **Task**
   - Task Title (Required): *"Send money to John"*
   - Notes / Description (Optional): *"Please show us the steps you would follow to send money to John, add the balance, and go back to your account overview."*
   - Connect Your Product (Required): Linked manually
   - Start Screen (Required): Edit manually
   - Success Criteria (Required): Edit manually
5. **Opinion Scale**
   - Question (Required): *"How easy was the task?"*
   - Notes / Description (Optional): -
   - Scale Type (Required): Numerical (1-5)
   - Label (Optional): Very difficult, Very easy
6. **Open Question**

- Question (Required): *"What did you find easy about the task you performed?"*
- Notes / Description (Optional): -
- Show an Image (Optional): -

7. **Open Question**
   - Question (Required): *"Could you tell us what was unclear, or what was missing?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
8. **Open Question**
   - Question (Required): *"Is there anything else we didn't ask, or that you'd like to add regarding the prototype?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
9. **Thank You (as default)**

2.6 Test mobile app usability

Description:

Ensure your mobile app delivers a smooth, intuitive experience. This template helps you uncover usability issues, validate user expectations, and identify friction—so your product feels effortless to use on smaller screens.

What you'll gain from this test:

✅ **How usable your mobile app is**
Measure usability and overall user satisfaction by observing how users complete key tasks on mobile.

✅ **Navigation and flow clarity**
See whether users can move through your app with ease and identify friction points in the mobile journey.

✅ **What's working—and what isn't**
Highlight strengths and weaknesses to share with Product and Design teams for focused improvements.

✅ **Early validation for better mobile design**
Test design decisions early to shape more effective and user-friendly mobile experiences.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Task**
   - Task Title (Required): *"Send money to John"*
   - Notes / Description (Optional): -
   - Connect Your Product (Required): Linked manually

- Start Screen (Required): Edit manually
- Success Criteria (Required): Edit manually

3. **Open Question**
   - Question (Required): *"Which parts of the app did you like the most?"*
   - Notes / Description (Optional): *"Why?"*
   - Show an Image (Optional): -
4. **Open Question**
   - Question (Required): *"Which parts of the app did you like the least?"*
   - Notes / Description (Optional): *"Why?"*
   - Show an Image (Optional): -
5. **Context Screen**
   - Question (required): *"In the next step you'll see a prototype of a bank app."*
   - Notes / Description (optional): "*Don't worry if something does not work, this is just a prototype so some functionality will be missing."*
6. **Opinion Scale**
   - Question (Required): *"What did you think of the interface?"*
   - Notes / Description (Optional): -
   - Scale Type (Required): Star (1-5)
   - Label (Optional): -
7. **Yes/No**
   - Question (required): *"Could you see yourself using this app regularly?"*
   - Notes / Description (optional): -
   - Visual Type
     - Icons:
       - ✅Yes
       - ❌No
8. **Open Question**
   - Question (Required): *"Why?"*
   - Notes / Description (Optional): *"Describe how your experience could have been improved."*
   - Show an Image (Optional): -
9. **Thank You (as default)**

2.7 Validate live website sign-up funnel flow

Description:

Define what a successful sign-up journey looks like on your live website, then test it with real users. Capture how users navigate your funnel, including alternate paths and behaviors, to understand whether they follow the intended flow—or find their own way through.

What you'll gain from this test:

✅ **How well your sign-up funnel performs**
Measure the effectiveness of your live funnel and identify key moments where users abandon or struggle to continue.

✅ **Alternative paths users take**
See which pages or steps users visit outside the ideal flow and understand which detours are most common.

✅ **User perception of navigation and layout**
Gather direct feedback through open and closed questions to learn how users interpret your design and structure.

✅ **What's impacting conversion**
Uncover usability issues and hidden challenges that affect completion, so you can optimize your funnel with confidence.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Yes/No**
   - Question (required): *"Could you see yourself using this app regularly?"*
   - Notes / Description (optional): -
   - Visual Type
     - Icons:
       - ✅Yes
       - ❌No
3. **Context Screen**
   - Question (required): *"Introducing YoBank"*
   - Notes / Description (optional): *"A bank made for people on the move. In the next screen we'll ask you to complete a task and ask for some feedback on your experience with our site.."*
4. **Task**
   - Task Title (Required): *"Create a Current Account with YoBank"*
   - Notes / Description (Optional): -
   - Connect Your Product (Required): Linked manually
   - Start Screen (Required): Edit manually
   - Success Criteria (Required): Edit manually
5. **Opinion Scale**
   - Question (Required): *"On a scale of 1-10, how easy was it to create an account?"*
   - Notes / Description (Optional): -
   - Scale Type (Required): Numerical (1-10)
   - Label (Optional): Very difficult, Very easy
6. **Open Question**
   - Question (Required): *"Tell us more about your score"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
7. **Yes/No**

- Question (required): *"Would you be open to us contacting you about future research sessions?"*
- Notes / Description (optional): -
- Visual Type
  - Icons:
    - ✅Yes
    - ❌No

8. **Simple Input**
   - Question (Required): *"Great!"*
   - Notes / Description (Optional): *"Please leave your email address so we can set up a time with you."*
   - Show an Image (Optional): -
   - Type (Required): Email
9. **Thank You (as default)**

2.8 Test live website navigation

Description:

Understand how users move through your live website by testing first impressions of your header navigation and exploring how they group information through a closed card sort. Gain clarity on whether your structure supports easy discovery.

What you'll gain from this test:

✅ **How effective your information architecture is**
Learn whether your current structure supports user goals and aligns with how people expect content to be organized.

✅ **Can users find key information?**
Test if critical pages and content are easy to locate—or if users struggle along the way.

✅ **How users interpret your terminology**
Understand how users would group and label content based on your existing wording and categories.

✅ **See real user behavior in context**
Review session replays with video and screen recordings to better understand user decisions and navigation patterns.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Task (Live Website)**
   - Task Title (Required): *"Find our Services page"*
   - Notes / Description (Optional): -

- Connect Your Product (Required): Linked manually
- Start Screen (Required): Edit manually
- Success Criteria (Required): Edit manually

3. **Opinion Scale**
   - Question (Required): *"What was your first impression of the navigation?"*
   - Notes / Description (Optional): -
   - Scale Type (Required): Emotion (1-5)
   - Label (Optional): Unclear, Clear
4. **Yes/No**
   - Question (required): *"Was the Services page where you expected it to be?"*
   - Notes / Description (optional): -
   - Visual Type
     - Icons:
       - ✅Yes
       - ❌No
5. **Card Sorting**
   - Task (Required): *"Organize these pages into categories!"*
   - Notes / Description (Optional): -
   - Cards:
     List:
     - Services
     - Pricing
     - Plans
     - About us
     - How it works
     - Features
   - Card Sorting Type (required): Closed
   - Categories (required for Closed Card Sorting):
     List:
     - Resources
     - About us
     - Main navigation
   - Type (Required): Email

10. **Thank You (as default)**

2.9 Test your website sign-up flow

Description:

Test how smoothly users move through your website's sign-up flow—from first interaction to completion. This template helps you uncover navigation issues, friction points, and usability gaps using either lo-fi or hi-fi wireframes and prototypes.

What you'll gain from this test:

- ✅ **How effective your information architecture is**
  Learn whether your current structure supports user goals and aligns with how people expect content to be organized.
- ✅ **Can users find key information?**
  Test if critical pages and content are easy to locate—or if users struggle along the way.
- ✅ **How users interpret your terminology**
  Understand how users would group and label content based on your existing wording and categories.
- ✅ **See real user behavior in context**
  Review session replays with video and screen recordings to better understand user decisions and navigation patterns.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Task (Live Website)**
   - Task Title (Required): *"Sign up to [Product] on the [Sport Addict Plan]"*
   - Notes / Description (Optional): -
   - Connect Your Product (Required): Linked manually
   - Start Screen (Required): Edit manually
   - Success Criteria (Required): Edit manually
3. **Opinion Scale**
   - Question (Required): *"On a scale of 1-10, how was your experience with the interface?"*
   - Notes / Description (Optional): -
   - Scale Type (Required): Numerical (1-10)
   - Label (Optional): Not user friendly, Very user friendly
4. **Multiple Choice**
   - Question (Required): *"How did you find the process of signing up?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
   - Selection Type (Required): Single select (Radio button)
   - Choices (Required): Each choice includes a text input field
     Options:
     - Very unintuitive
     - Unintuitive
     - Intuitive
     - Very intuitive
5. **Open Question**
   - Question (Required): *"What are your thoughts on the design and layout?"*
   - Notes / Description (Optional): -

- Show an Image (Optional): -

6. **Yes/No**
   - Question (required): *"Was the navigation as expected?"*
   - Notes / Description (optional): -
   - Visual Type
     - Icons:
       - ✅Yes
       - ❌No
7. **Open Question**
   - Question (Required): *"What could we do to improve this?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
8. **Open Question**
   - Question (Required): *"How did you find language usage across the website?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
9. **Open Question**
   - Question (Required): *"Any additional feedback on your experience with the website?"*
   - Notes / Description (Optional): -
   - Show an Image (Optional): -
10. **Thank You (as default)**

2.10 Run a Single Ease Question (SEQ) test

Description:

Understand how easy—or difficult—tasks feel for your users by running a Single Ease Question (SEQ) test. This template helps you collect fast, quantitative feedback and uncover friction points so you can improve your product with confidence.

What you'll gain from this test:

✅ **Spot usability issues before launch**
Run a SEQ test ahead of release to uncover problems early and identify opportunities for improvement.

✅ **How users complete tasks without guidance**
See whether users can naturally understand and complete tasks without additional context or support.

✅ **Track usability over time**
Continue measuring task ease after launch to monitor changes and refine features and flows using clear metrics.

✅ **Make confident design decisions**

Use quantifiable feedback to validate improvements and deliver a smoother, more friction-free experience.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Context Screen**
   - Question (required): *"In the next few moments,"*
   - Notes / Description (optional): *"you'll be given a task to complete and asked one follow up question to rate your experience. Remember to do what comes naturally; there are no wrong answers here!"*
3. **Task (Prototype)**
   - Task Title (Required): *"Send some money to John"*
   - Notes / Description (Optional): -
   - Connect Your Product (Required): Linked manually
   - Start Screen (Required): Edit manually
   - Success Criteria (Required): Edit manually
4. **Opinion Scale**
   - Question (Required): *"Overall, how difficult or easy was this task to complete?"*
   - Notes / Description (Optional): -
   - Scale Type (Required): Numerical (1-7)
   - Label (Optional): Very difficult, Very easy
5. **Thank You (as default)**

2.11 System Usability Scale (SUS) Template

Description:

Measure the perceived **usability and user satisfaction** of your product using the industry-standard System Usability Scale (SUS). This template helps you capture a reliable usability score while understanding how satisfied users feel with the overall experience, including ease of use, consistency, and confidence.

What you'll gain from this test:

✅ **Understand overall usability perception**
Quantify how easy or difficult users feel your product is to use, based on a standardized and widely recognized usability metric.

✅ **Benchmark usability over time**
Track usability improvements across releases and compare results consistently using a single SUS score.

✅ **Identify usability friction**
Reveal where users feel confusion, inconsistency, or complexity that may not surface through task-based testing alone.

✅ **Support confident product decisions**

Use SUS results to validate design direction, prioritize improvements, and communicate usability outcomes clearly to stakeholders.

Example test flow (Default content):

1. **Welcome screen (as default)**
2. **Task**
   - Task Title (Required): *"Explore our new feature"*
   - Notes / Description (Optional): *"Send some money to John"*
   - Connect Your Product (Required): Linked manually
   - Start Screen (Required): Edit manually
   - Success Criteria (Required): Edit manually
3. **Opinion Scale**
   - Question (Required): *"I think that I would like to use this [Feature] frequently."*
   - Notes / Description (Optional): -
   - Scale Type (Required): Numerical (1-5)
   - Label (Optional): Disagree, Neutral, Agree
4. **Opinion Scale**
   - Question (Required): *"I found the [Feature] unnecessarily complex.."*
   - Notes / Description (Optional): -
   - Scale Type (Required): Numerical (1-5)
   - Label (Optional): Disagree, Neutral, Agree
5. **Opinion Scale**
   - Question (Required): *"I thought the [Feature] was easy to use."*
   - Notes / Description (Optional): -
   - Scale Type (Required): Numerical (1-5)
   - Label (Optional): Disagree, Neutral, Agree
6. **Opinion Scale**
   - Question (Required): *"I think that I would need the support of a technical person to be able to use [Feature]"*
   - Notes / Description (Optional): -
   - Scale Type (Required): Numerical (1-5)
   - Label (Optional): Disagree, Neutral, Agree
7. **Opinion Scale**
   - Question (Required): *"I think that I would like to use this [Feature] frequently."*
   - Notes / Description (Optional): -
   - Scale Type (Required): Numerical (1-5)
   - Label (Optional): Disagree, Neutral, Agree
8. **Opinion Scale**
   - Question (Required): *"I found the various functions in this [Feature] were well integrated."*
   - Notes / Description (Optional): -
   - Scale Type (Required): Numerical (1-5)
   - Label (Optional): Disagree, Neutral, Agree

9. **Opinion Scale**
    - Question (Required): *"I thought there was too much inconsistency in this [Feature]."*
    - Notes / Description (Optional): -
    - Scale Type (Required): Numerical (1-5)
    - Label (Optional): Disagree, Neutral, Agree
10. **Opinion Scale**
    - Question (Required): *"I would imagine that most people would learn to use [Feature] very quickly."*
    - Notes / Description (Optional): -
    - Scale Type (Required): Numerical (1-5)
    - Label (Optional): Disagree, Neutral, Agree
11. **Thank You (as default)**
